

European Single Beam Overhead Crane

◆ **Basic Parameter:**

Power source: 380V 50hz 3

Phase Lifting capacity: 3-20t

Span: 18-35m

Lifting height: 10-12m

Working level: A3-A7

Single-girder European-style crane is a special type of single-girder crane. It combines European crane design concepts and technology with higher performance and wider

application range. Compared with traditional single-girder cranes, single-girder European-style cranes have a more compact structure, more flexible operation, and can adapt to various complex working environments.

It has light weight, compact structure and low energy consumption. The limit distance between the hook and the wall is the smallest, and the clearance height is the lowest. Compact and flexible: European-style single-girder cranes adopt a single-girder structure, the overall design is more compact, and the floor space is relatively small.
