

## European Chain Hoist

### ◆ Basic Parameter:

Load capacity: 125kg~2000kg

Lifting height: 3m~20m or customized

Drive device: electric or manual

Working level: M5

Power supply: according to your power supply

### Applications:

It is widely used in machinery manufacturing, automobile manufacturing, aircraft manufacturing, shipbuilding industry, railway transportation, food production, electricity, energy and other industries to help people easily complete heavy lifting operations.

European electric chain hoist has compact structure and reliable performance. Modular design enables our products to flexibly form different lifting tonnage, lifting speed and working level systems. Excellent performance meets the requirements of rapid cargo transfer and precision assembly, and can also be widely used in places with complex use requirements to meet the personalized needs of customers. Standardized and user-friendly design greatly reduces maintenance costs and improves operating performance. The main components are maintenance-free and do not need to be replaced during use, which complies with safety regulations.
