

Headroom Chain Hoist

◆ **Basic Parameter:**

Load capacity:0.5~10t

Working level:M2/M5

Lifting height:3m/9m

Power supply :380V/50HZ/3P or customized

Applications:

Molds, machinery manufacturing, warehousing and logistics, shipbuilding, bridge construction and other industries and factories and other special purposes.

The low-headroom chain electric hoist is a lifting tool specially designed for low-rise factories. Compared with ordinary electric hoists, it has ultra-low headroom dimensions. The distance between the upper and lower hooks is lower than that of ordinary electric hoists, and the hook can be raised to the bottom of the track, shortening the distance between the machine body and the beam track, greatly increasing the lifting height. Therefore, it is suitable for use in low-rise factories and other work environments with strict requirements on the lifting height.
