

## Flexible KBK Crane

### ◆ *Basic Parameter:*

Lifting weight 0-2000kgs

Lifting height: 0-10M

Style: Monorail, Single Beam, Double Beam, Expansion Beam

Power 380V, 50HZ 3P or customized

### Applications:

Flexible KBK crane is a lightweight and small lifting equipment, which works based on the coordinated operation of tracks, suspension devices, running carts, and electric hoists. The electric hoist is responsible for lifting heavy objects, while the running trolley moves flexibly along the track. The suspension device ensures that the entire system is stably suspended in the air, thereby achieving the lifting and handling of materials in three-dimensional space.

The components of the KBK lightweight crane system are all standard modules, which can ensure large-scale and high-quality production, making the system very reliable; The main body of the system module consists of three specifications of cold-rolled profiles, which have high strength, good rigidity, and light weight, ensuring the stability of the system.
